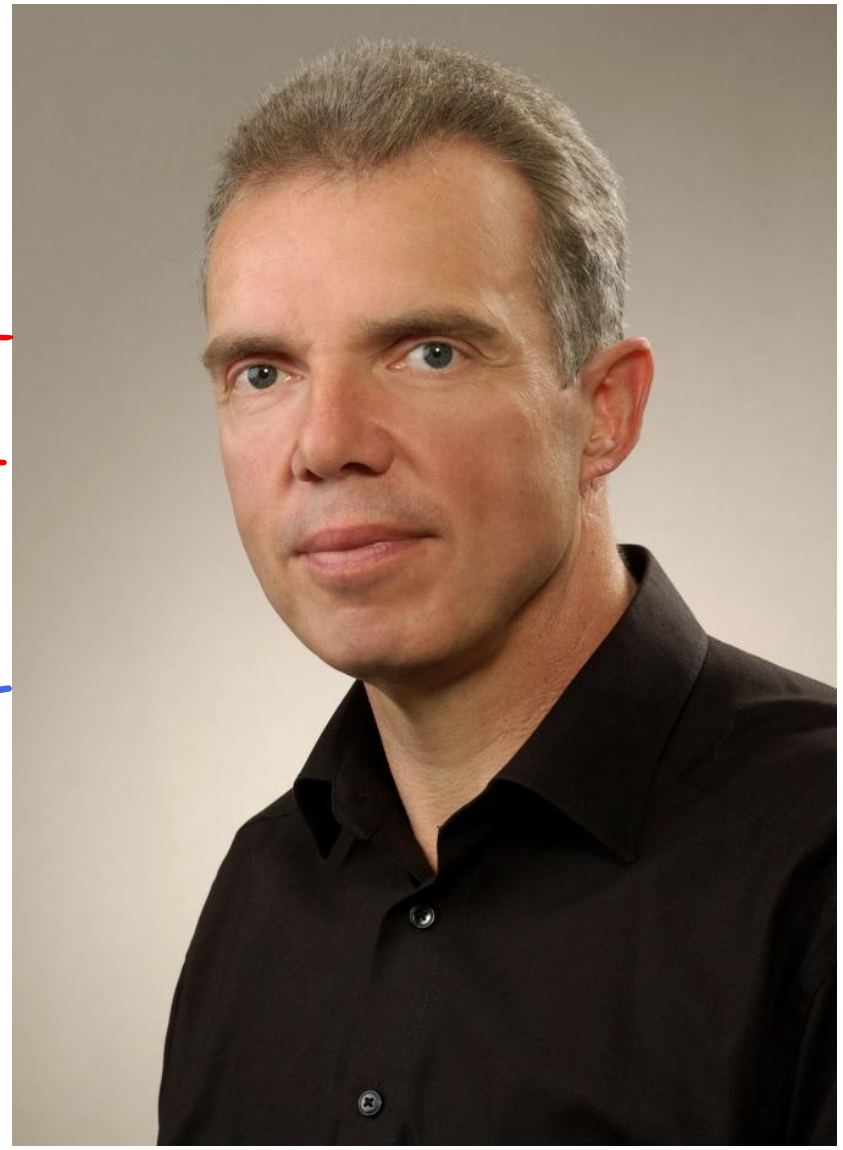
Microsoft Certified:
Azure AI Fundamentals



About this course

What we'll cover

In this course, you will learn how to develop various AI solutions in Azure. Topics covered include generative AI, AI agents, natural language processing, computer vision, and information extraction. Specifically, you'll learn how to:

- Provision Azure resources and use Microsoft Foundry
- Customize, train, deploy, and use various Foundry models
- Use APIs and SDKs to consume models and services from client applications

Intended audience

The primary audience for this course is application developers seeking to include Azure AI functionality in their applications.

Although most Azure AI services can be used with web portals, to use the APIs and SDKs effectively, a basic knowledge of programming is recommended. The labs in this course are based on Python (links to SDKs for other languages are provided)

Agenda

1. Develop generative AI apps Foundry
2. Develop AI agents
3. Develop natural language solutions NLP
4. Develop computer vision solutions
5. Develop AI information extraction solutions RAG

1	2	3	4	5
Generative AI	Agents and automation	Natural Language	Computer Vision	Information Extraction

Get the most out of your Microsoft Learn profile

Verify, track, and share your training and certification progress and accomplishments—*all on one platform*

- Claim your achievement code for this course and share you have completed it.
- Access your course material and track progress on your learning activities.
- Share and verify your Microsoft Certifications via email, on social networking platforms, and on your résumé.
- Download and print transcripts and certificates.
- Manage your upcoming activities and certification exam appointments.

Overview

⚠ **Warning**

This certification, related exam, and renewal assessments will retire on June 30, 2026. You will no longer be able to earn or renew this certification after this date. Learn more.

As a Microsoft Azure AI engineer, you build, manage, and deploy AI solutions that leverage Azure AI.

New Microsoft Certification exams (beta) timeline

Choose and deploy a language model

> **Note**: This exercise is deprecated. Consider completing the replacement exercise at https://go.microsoft.com/fwlink/?linkid=2354118.

The Microsoft Foundry model catalog serves as a central repository where you can explore and use a variety of models, facilitating the creation of your generative AI scenario.

In this exercise, you'll explore the model catalog in Foundry portal, and compare potential models for a generative AI application that assists in solving problems.

This exercise will take approximately **25** minutes.

> **Note**: Some of the technologies used in this exercise are in preview or in active development. You may experience some unexpected behavior, warnings, or errors.

Explore models

Let's start by signing into Foundry portal and exploring some of the available models.

1. In a web browser, open the Foundry portal at `https://ai.azure.com` and sign in using the username
